

SEAL-A-CRETE™ PLUS+

PERMANENT PENETRATING CONCRETE PROTECTION WITH ADDED ENZYMES, SURFACTANTS, DETERGENTS AND RETARDERS

PERMANENTLY WATERPROOFS, SEALS, HARDENS AND SANITISES CONCRETE NATURALLY KILLS & INHIBITS MICROBE & MOULD GROWTH WITHOUT ADDING HARMFUL CHEMICALS DESIGNED SPECIFICALLY FOR HEALTHCARE, ANIMAL CARE AND HOSPITALITY MARKETS

- + Nursing homes
- + Hospitals
- + Stables
- + Animal shelters
- + Kennels
- + Cool rooms and Freezer rooms
- + Toilet blocks
- + Food processing rooms
- + Swimming Pools

- **Permanently water proofs all concrete**
- **Protects against urine and other contaminants**
- **Purges existing contaminants to the surface**
- **Sanitises and inhibits microbe & Mould growth**
- **Hardens and protects**
- **Prevents hydrostatic pressure**
- **Zero Voc. Environmentally friendly**
- **Compatible with all impervious flooring, adhesives and coatings**
- **Naturally creates a hostile environment for Bacteria and Mould to survive & without the need for questionable chemical additives such as Triclosan.**

**The U.S Food & Drugs Administration says "Animal studies have shown that Triclosan alters hormone regulation"
A report by the National Drugs & Poisons Schedule Committee also found Triclosan to be highly toxic to aquatic life, even at low concentrations.*

In addition to constituents found in Seal-a-crete, Seal-a-crete plus contains Enzymes, surfactants, detergents, and retarders specifically formulated to enable extra deep penetration whilst starving bacteria and moulds of moisture and oxygen needed to survive. For bacteria to flourish it needs both oxygen and moisture. By creating more Calcium-silicate-hydrate, which is already present in concrete, the air porosities in concrete structures are closed to a point where Seal-a-crete plus permanently creates a moisture barrier and reduces oxygen available inside concrete. Water and bodily fluids cannot pass the surface of the concrete. Further, hydrostatic pressure is prevented and the slab is hardened by up to 20%. For older already contaminated slabs the Seal-a-crete plus will purge any foreign matter to the surface where it can be simply washed away.

The final result being a harder, more dense, waterproofed and sanitised concrete slab which can never be worn off.
